

Accessibility Conformance Report: OpenMRS O3 3.7.1

Format: based on the ITI VPAT® 2.5 (WCAG edition). VPAT is a registered trademark of the Information Technology Industry Council (ITI).

Independent assessment, not issued by the OpenMRS project. This report was produced by an independent auditor as a portfolio sample. It covers a sample of eight screens and two processes (see the [audit report](#)). ITI guidance asks for a determination on every Level A and AA criterion; criteria outside the tested sample are marked **Not Evaluated** rather than given an unsupported determination.

Product information

Item	Value
Name of product/version	OpenMRS O3 Reference Application 3.7.1
Report date	7 October 2026
Product description	Open-source electronic medical record system (web application)
Contact information	Auditor: Tayguara Dias Reis — github.com/tayguara
Notes	Evaluated on a local instance with the distribution's demo data. Status of each finding on the current source code: see source-verification.md .
Evaluation methods used	WCAG-EM sample; automated scan with axe-core 4.13.0 (Playwright 1.63); manual keyboard testing in Firefox and Chrome; 200% zoom and 320 px reflow; DOM inspection; screen readers: Orca + Firefox (Linux), TalkBack + Chrome (Android). NVDA, JAWS and VoiceOver not tested.

Applicable standards

Standard/Guideline	Included in report
Web Content Accessibility Guidelines 2.2	Level A (Yes), Level AA (Yes), Level AAA (No)

Terms

- **Supports:** the functionality has at least one method that meets the criterion without known defects, within the tested sample.
- **Partially Supports:** some functionality does not meet the criterion.
- **Does Not Support:** the majority of the tested functionality does not meet the criterion, or the failure blocks a task.
- **Not Applicable:** the criterion is not relevant to the tested sample.
- **Not Evaluated:** outside the scope of this sample-based assessment.

Summary

Conformance level	Criteria
Supports	8

Conformance level	Criteria
Partially Supports	3
Does Not Support	8
Not Applicable	7
Not Evaluated	30

Table 1: Success Criteria, Level A

Criteria	Conformance Level	Remarks and Explanations
1.1.1 Non-text Content	Not Evaluated	No automated failures for images or icons with alternatives. Manual review of icons and avatars not performed. The unnamed help button is reported under 4.1.2.
1.2.1 Audio-only and Video-only (Prerecorded)	Not Applicable	No audio-only or video-only content in the sampled screens.
1.2.2 Captions (Prerecorded)	Not Applicable	No prerecorded video in the sampled screens.
1.2.3 Audio Description or Media Alternative (Prerecorded)	Not Applicable	No prerecorded video in the sampled screens.
1.3.1 Info and Relationships	Partially Supports	Form errors are programmatically associated with their fields (aria-describedby, aria-invalid). Fails: the user menu list has invalid structure on every screen (A2).
1.3.2 Meaningful Sequence	Not Evaluated	
1.3.3 Sensory Characteristics	Not Evaluated	
1.4.1 Use of Color	Does Not Support	"See all" links in chart widgets are distinguished from surrounding text by colour only, at 1.55:1 (A5). Form errors use text and an icon, not only colour.
1.4.2 Audio Control	Not Applicable	No audio that plays automatically.
2.1.1 Keyboard	Supports	In the sampled processes, all functions tested were operable by keyboard: navigation, table pagination, patient search, registration form and date entry. Several have focus problems reported under 2.4.3, 2.4.7 and 2.4.11.
2.1.2 No Keyboard Trap	Supports	Calendar pop-up closes with Esc and can be left with Tab. No trap found in the sample.
2.1.4 Character Key Shortcuts	Not Evaluated	
2.2.1 Timing Adjustable	Not Evaluated	The session expires after inactivity; warning and extension behaviour not evaluated. The auto-dismissing error toast is not a failure because the same errors remain next to each field.
2.2.2 Pause, Stop, Hide	Not Evaluated	
2.3.1 Three Flashes or Below Threshold	Not Evaluated	No flashing content observed.
2.4.1 Bypass Blocks	Not Evaluated	Flagged for manual review by the automated tool on the login page; not concluded.

Criteria	Conformance Level	Remarks and Explanations
2.4.2 Page Titled	Does Not Support	Every screen has the same title, "OpenMRS" (M8).
2.4.3 Focus Order	Does Not Support	Changing the page of a chart table moves keyboard focus to the document body (M1).
2.4.4 Link Purpose (In Context)	Not Evaluated	
2.5.1 Pointer Gestures	Not Evaluated	
2.5.2 Pointer Cancellation	Not Evaluated	
2.5.3 Label in Name	Not Evaluated	
2.5.4 Motion Actuation	Not Evaluated	
3.1.1 Language of Page	Supports	The page language is declared (automated check passed on all sampled screens).
3.2.1 On Focus	Not Evaluated	
3.2.2 On Input	Supports	Typing in the patient search updates results without moving focus or changing context (tested with TalkBack).
3.2.6 Consistent Help	Supports	The help button is in the same position on every sampled screen.
3.3.1 Error Identification	Supports	Empty required fields are identified in text next to each field and focus moves to the first error. Recommendation: use the visible label in error messages ("Gender is required" for the field labelled "Sex").
3.3.2 Labels or Instructions	Supports	Registration fields have visible labels; optional fields are marked and the form states that other fields are required.
3.3.7 Redundant Entry	Not Evaluated	
4.1.1 Parsing	Not Applicable	Obsolete and removed in WCAG 2.2.
4.1.2 Name, Role, Value	Does Not Support	Help button without a name (A1, fixed in current source); invalid role on the refine-search form (A3, fixed in current source); vitals header is a fake button containing other controls, with no keyboard action (A6, M2); filter dropdowns with empty labels (A9); focusable content inside aria-hidden (A10); a button nested inside each search result link (M4).

Table 2: Success Criteria, Level AA

Criteria	Conformance Level	Remarks and Explanations
1.2.4 Captions (Live)	Not Applicable	No live media.
1.2.5 Audio Description (Prerecorded)	Not Applicable	No prerecorded video in the sampled screens.
1.3.4 Orientation	Not Evaluated	
1.3.5 Identify Input Purpose	Not Evaluated	
1.4.3 Contrast (Minimum)	Partially Supports	Most text passes automated checks. Fails: date placeholders in the registration form at 1.72:1 (A4). 76 items over coloured backgrounds need manual review.

Criteria	Conformance Level	Remarks and Explanations
1.4.4 Resize Text	Supports	At 200% zoom, registration, search and chart reflow without loss of content or functionality.
1.4.5 Images of Text	Not Evaluated	
1.4.10 Reflow	Does Not Support	At 320 px wide, content is clipped without a way to reach it; the registration form cannot be completed (M7).
1.4.11 Non-text Contrast	Not Evaluated	
1.4.12 Text Spacing	Not Evaluated	
1.4.13 Content on Hover or Focus	Not Evaluated	
2.4.5 Multiple Ways	Not Evaluated	
2.4.6 Headings and Labels	Not Evaluated	Recommendation: the same field is named differently in its label, its error and the error summary ("Date of birth", "Birthday", "birthdate").
2.4.7 Focus Visible	Does Not Support	No visible focus on the vitals card header (M2), on calendar days and the calendar trigger (M5).
2.4.11 Focus Not Obscured (Minimum)	Partially Supports	Passes in the desktop layout. Fails at 200% zoom: the fixed bottom toolbar of the chart fully hides focused controls (M6).
2.5.7 Dragging Movements	Not Evaluated	
2.5.8 Target Size (Minimum)	Does Not Support	Targets of 16 px in the vitals header (A7) and the appointments date picker (A8).
3.1.2 Language of Parts	Not Evaluated	
3.2.3 Consistent Navigation	Not Evaluated	
3.2.4 Consistent Identification	Not Evaluated	
3.3.3 Error Suggestion	Not Evaluated	Only required-field errors were triggered.
3.3.4 Error Prevention (Legal, Financial, Data)	Not Evaluated	
3.3.8 Accessible Authentication (Minimum)	Not Evaluated	Login uses username and password without a cognitive test; paste and password manager support not verified.
4.1.3 Status Messages	Does Not Support	The patient search results count is not exposed as a status message (M3).
